ON/Off Latching Switch using Radio Control

The RCOOLS (Radio Control On Off Latching Switch) is a device similar to the Res-Com 2000. Powered from 24VAC, a single channel radio control receiver can be attached to the RCOOLS.

Then with an accompanying single channel transmitter, a motor or any other control circuit connected to the RCOOLS can be latched on (or off) by pressing the transmitter. The device will stay on (or off) until transmitter is pressed again.

The output of the RCOOLS can be either normally open or normally closed depending on which two of three wires are connected to the RCOOLS.

Wiring diagram is located on each unit.
